

Contents

| | |
|--|-----------|
| 1 Lecture | 3 |
| 1.1 Finite Difference Method | 3 |
| 1.2 Linear Wave Equation | 4 |
| 1.3 Stability Analysis | 4 |
| 1.4 Nonlinear Wave Equation | 14 |
| 1.5 Upwind Scheme for the Hydrodynamical Equations | 19 |
| 1.6 Higher-order Accuracy | 33 |
| 1.7 Extension to Multi-dimensional Problems | 41 |
| 1.8 Inclusion of Gravity, Heating and Cooling | 47 |
| 1.9 Extension to the Cylindrical and Spherical Coordinates | 48 |
| 1.10 Boundary Conditions | 50 |
| 1.11 Extension to MHD Equations | 51 |
| 1.12 Some Other Numerical Schemes | 57 |
| 2 Exercises | 59 |
| 2.1 Usage of the example package scalar | 59 |
| 2.1.1 Compilation and execution of the program | 59 |
| 2.1.2 Output data file (out.dat) | 60 |
| 2.1.3 Visualization of a result | 60 |
| 2.1.4 Modification of the program | 62 |
| 2.1.5 Appendix | 64 |
| 2.1.6 Exercise | 67 |
| 2.2 Usage of the CANS package: shock tube problem | 70 |
| 2.2.1 CANS1D | 70 |
| 2.2.2 Compilation of the subroutines in CANS1D | 70 |
| 2.2.3 Compilation and execution of the main program | 71 |
| 2.2.4 Visualization of a result | 71 |
| 2.3 Exercise | 73 |
| 2.3.1 Try CANS1D | 73 |
| 2.3.2 Try and modify the package md_shktb | 74 |
| 2.3.3 Try and modify the package md_sedov | 74 |
| 2.4 Advanced Exercise | 75 |
| 3 Magneto-Hydrodynamical Simulation Software CANS | 76 |
| 3.1 What is CANS? | 76 |
| 3.1.1 Astrophysical Magneto-Hydrodynamical Simulation Software | 76 |
| 3.1.2 What we can do with CANS? | 76 |

| | | |
|-------|--|------------|
| 3.1.3 | Merit of CANS | 77 |
| 3.1.4 | Structure of CANS | 77 |
| 3.2 | Let's Use CANS! | 77 |
| 3.2.1 | Working Environment | 77 |
| 3.2.2 | Installation | 78 |
| 3.2.3 | Check the Contents | 78 |
| 3.2.4 | Compilation | 80 |
| 3.2.5 | Execution of CANS program | 81 |
| 3.2.6 | Preparation for IDL | 82 |
| 3.2.7 | Read Data by IDL and Display | 82 |
| 3.3 | Computation Flow | 83 |
| 3.3.1 | Initial Set Up - main.f | 83 |
| 3.3.2 | Selection of computation scheme - main.f | 86 |
| 3.3.3 | End Procedure - main.f | 88 |
| 3.3.4 | Model Definition - model.f | 88 |
| 3.3.5 | Setup of Grid Interval - grdrdy.f | 91 |
| 3.3.6 | Setup for Vector Potential - bbtoaa_c.f | 91 |
| 3.3.7 | Setup for Boundary Condition - bnd.f | 91 |
| 3.3.8 | Check the Lower Limit - chkdav.f | 92 |
| 3.3.9 | Setup of CFL Condition - cfl_m.f | 92 |
| 3.4 | Modified Lax-Wendroff Scheme | 92 |
| 3.4.1 | Basic Equations | 92 |
| 3.4.2 | Magneto Hydrodynamics | 93 |
| 3.4.3 | Conservation Forms of Basic Equations | 94 |
| 3.4.4 | Differential Equation | 94 |
| 3.4.5 | Introduction of the Artificial Viscosity | 100 |
| 3.4.6 | Computational Engine - mlw_m_c.f | 101 |
| 3.5 | Acknowledgment | 109 |
| 4 | List of Group Projects | 110 |
